

## **New: Quick delivery service for Europe**

### **Schneeberger Monorail and Minirail profiled guideways – easily ordered online and delivered quickly**

**Schneeberger Lineartechnik launches its new quick delivery service in Europe. The popular Monorail and Minirail profiled guideways are clearly presented in the e-Shop. These products can be standardized or configured to the required size and ordered online at any time of day. The products are shipped within five working days from the central warehouse in Höfen/Enz.**

Simply order online and receive delivery from stock within a short time. That's what customers want and are already used to in their private lives. Schneeberger Lineartechnik has responded to this need with its new quick delivery service and sees great potential in particular for specialist retailers and for replacement deliveries of proven profiled guideways and carriages. The Monorail and Minirail product groups can be ordered from stock and customized in the e-Shop. It is a major advantage that only the size and accuracy class have to be selected in the e-Shop for custom fabrication. The customer determines the individual length. The distance from the beginning or end of the rail to the first drill hole is determined automatically by the e-Shop. Accessories such as plugs and additional wipers can also be added. As a first step, orders are being delivered within the EU and to the United Kingdom and Switzerland and in limited quantities.

#### **Proven profiled guideways available from stock**

The high-precision profiled guideways with Monorail MR 25-35 rollers up to 6000 mm in length and Monorail MR 45-65 up to 3000 mm in length feature high rigidity, high dynamic and static load-bearing capacity, high running smoothness and sealing of the carriage on all sides. They are used worldwide in a wide range of applications in the machine tool industry.

High running smoothness, low pulsation, low friction coefficients and high travel speeds are the characteristics of the Monorail BM profiled guideways with balls. This extremely reliable and economical product is used in medical technology, the semiconductor industry, laboratory automation, metrology, automation, robotics, the optics industry and machine tool construction.

Minirail miniature guideways are compact and precise for maximum productivity. They are extremely robust and impressive in every application due to their excellent friction movement, precision and reliability. They are also suitable for even the smallest installation spaces and are used in particular for medical technology and industrial and laboratory automation.

### The SCHNEEBERGER Group

SCHNEEBERGER® serves original equipment manufacturers operating (OEM) in various industries worldwide – from machine tool, solar technology and semiconductor technology to electrical engineering and medical engineering and others. Linear bearings, profiled linear guideways, measuring systems, gear racks, slides, positioning systems and mineral casting are all part of SCHNEEBERGER's product and manufacturing range. A.MANNESMANN has been part of the SCHNEEBERGER Group since October 2017. A.MANNESMANN is a leading supplier for the production of ball screw drives, telescopic actuators and drill spindles. A further expansion of the SCHNEEBERGER Group, an additional site was founded in Poland in 2020. The new company SCHNEEBERGER Components Poland produces precision parts for the entire group. Also as part of its strategic development, the Business Unit Systems has established the company "SCHNEEBERGER Precision Motion Systems (Shenzhen)". With the establishment of the new technology center for systems in Shenzhen with development, production, sales and service, SCHNEEBERGER will be closer to its Asian customers and thus be able to serve them even better with high-precision single and multi-axis systems.
